

Task 12 Implementation: Transfer the prototype to a web app

Transfer the early stage prototype views to a prototypical **lo-fi** HTML/CSS/JS application. Focus on the prototypical **views** of your early stage prototype, add **interaction** for switching the views (not too much functionality yet). **Ensure that you still apply the design (or usability) principles!**

Add all views you need for matching your scenarios and requirements.

- Use CSS/JS frameworks as necessary
- Add style sheets and scripts as external files. Comment them!

Test the mobile usage of different application views

- By using the phone emulator in Google Chrome.
- On your smartphones using GitHub.io

Store your web app in a (public) folder `v2` in the GitHub `gh-pages` branch.
